

Antifoam LPD

Description

Antifoam LPD is a food grade and innovative formulation for effective defoaming and foam inhibition used in the food industry, especially developed for dairy products, potato processing, and the starch industry.

Applications

1. **Dairy products.**
2. **Potato processing and starch industry** (for applications at low temperatures between 10°C and 40°C in potato processing and starch production).

Ingredients

- Polyalkoxylates
- Fatty acid esters

Recommended Dosage

- The dosing points should always be at places with high turbulence, like the suction side of pumps or control valves, to ensure a homogeneous distribution of the product already within the foaming areas.
- The necessary dosing rates can quickly and easily be determined at the site by variation of the pump settings. In general the addition of **5 to 25 ppm** in the foaming area will be sufficient.

Benefits

- Particularly effective in destroying and preventing foams caused by substances such as proteins, starch, and extracellular oligosaccharides.
- Rapid wetting of the foam interfaces by foam-active surfactants, which leads to an immediate reduction in surface tension and thus to the destabilization of the foam.
- Predominantly formulated on the basis of vegetable oils.
- Ensuring process and product quality through the economical use of processing aids.

Product Specifications

Parameters	Specification
Appearance	Yellowish, clear liquid
Density at 25 °C (g/cm ³)	approx. 0.9
Solubility in water	not miscible
Viscosity	approx. 360 mPa · s
Flash point	> 100 °C
Freezing point	approx. -20 °C

13	Lupin	-
14	Molluscs	-

Packaging

Plastic containers: 1 kg and 5 kg.

Shelf life

Shelf life is 12 months from date of production.

Storage Conditions

Store in cool place away from direct sunlight.
